

Sensing foot dynamics with Moticon SCIENCE sensor insoles

Pedobarography is a well established method in motion analysis. But none of the available systems allows completely free field measurements under real conditions. **Moticon SCIENCE does!** Get rid of all the cables and bulky plates in your lab and experience Moticon's fully integrated sensor insoles for groundbreaking research.

This workshop will show the potential of Moticon SCIENCE for innovative field studies. Within hands-on demo setups, the complete range of possibilities will be presented, such as fast handling, easy video synchronization, and automated reports based on intelligent pattern recognition. Participants are welcome to test the product, discuss their applications, and share their experiences. We look forward to seeing you at the ISBS2017 workshop.

Speakers: Pierre Widmann, Dipl Sport Sci. and Andre Zschernig, M.A.
